

Sector Buy/Sell Review: 05-05-20

Each week we produce a Sector Buy Sell chart book of the S&P 500 sectors to review where money is flowing within the market as whole. This helps refine not only decision making about what to own and when, but what sectors to overweight or underweight to achieve better performance.

HOW TO READ THE SECTOR BUY/SELL REVIEW CHARTS There are three primary components to each chart:

- *The price chart is in orange*
- *The Over Bought/Over Sold indicator is in gray*
- *The Buy / Sell indicator is in blue.*

When the gray indicator is at the TOP of the chart, there is typically more risk and less reward available at the current time. In other words, the best time to BUY is when the short-term condition is over-sold. Likewise when the buy/sell indicator is above the ZERO line investments have a tendency of working better than when below the zero line. **NEW PORTFOLIO**

TOOL: Under the PORTFOLIO tab you will see [a new tool called ALERTS.](#)

When you click on the link, any position that you in a WATCHLIST or PORTFOLIO will show up in the ALERTS window. You can add **SELL TARGETS, STOP LOSS, and Daily % Changes.** When those levels are triggered, you will be sent an email and the alerts will show on your dashboard. We are using this system for all our current positions and will be reporting our targets in these daily updates. **Basic Materials**

- We added to this sector previously, and the 200-dma retracement level has been reached. 2013266080;

- We recently added to our Technology holdings which technically is the best looking sector chart available.
- The rally on Monday continues to wrestle with resistance at the 61.8% retracement level and that is resistance is holding for now. (Markets are trying to chase other sectors which is symbolic of a late stage advance.)

- XLV finally ran into resistance near all-time highs. The 200-dma is now important support and needs to hold.
- Look for a short-term pullback that holds the 62.8% retracement level and the 200-dma and consolidates a bit here before adding weight. The sector is very overbought short-term.
- We have an alert set at \$95 to add to our holdings.
- Short-Term Positioning: Neutral
 - Last week: Hold positions
 - This week: Look to add
- Long-Term Positioning: Bullish

Discretionary

- Discretionary is performing better now.�
- XLY rallied to the 200-dma and failed at important resistance and is underperforming the broader market.�
- The sector is VERY overbought, so a pullback is likely, but there is a trading opportunity if XLY can hold support at the 50% retracement level..
- We are focusing on Staples for the time being but have an alert set to add Discretionary as a trading position at \$110.00

- We have remained out of the economically sensitive sector as the impact of the "coronavirus" continues to rip through earnings in this sector.™
