

Viking Analytics: Gamma Band Update 5/1/2023

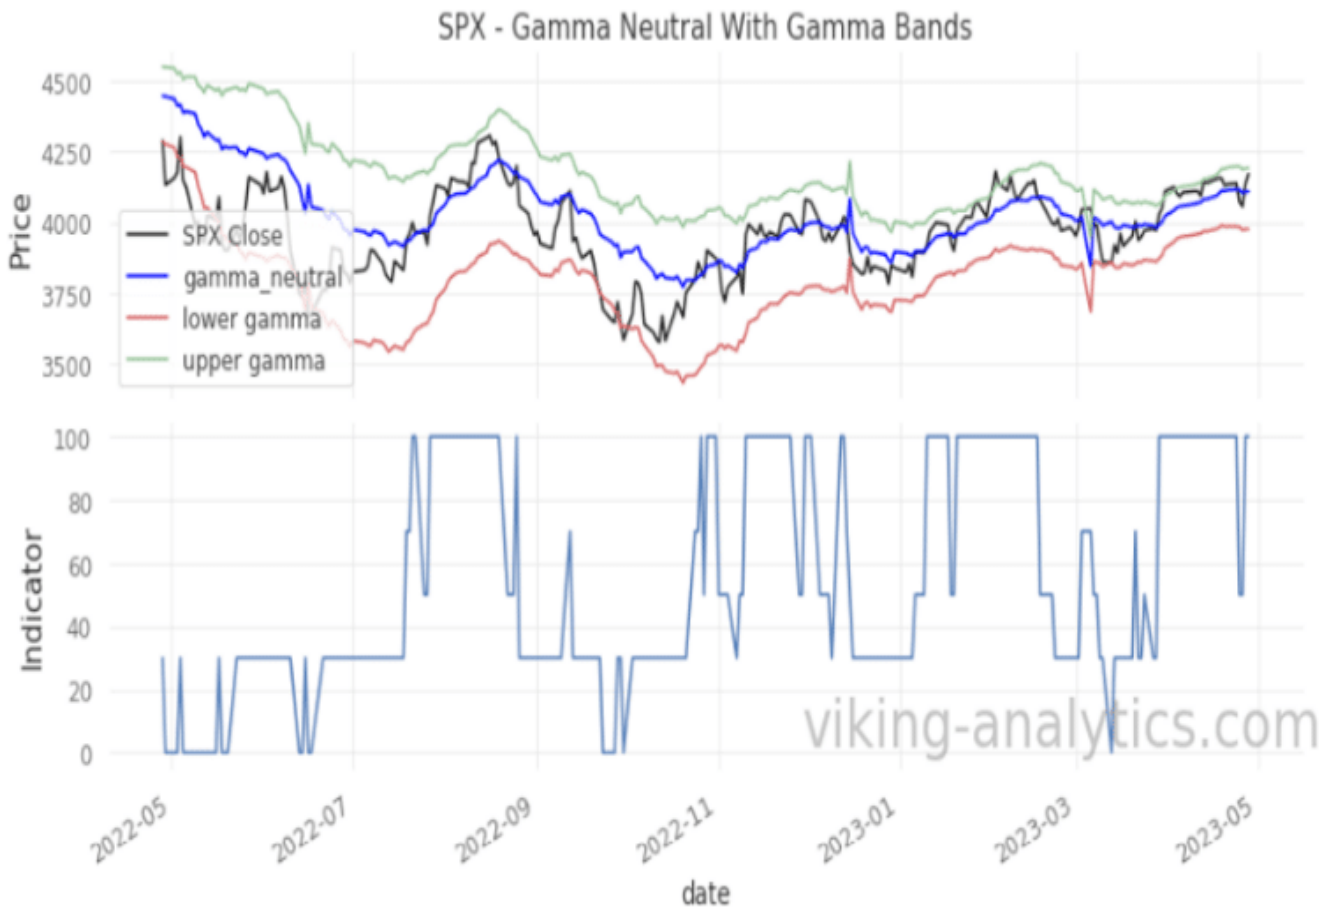

We share the Weekly Gamma Bands Update by Viking Analytics. The report uses options gamma to help you better manage risk and your equity allocations.

Gamma Bands

The S&P 500 (SPX) had a crazy whipsaw week to end April, closing 36 points higher on the week, and near yearly closing highs.

The gamma band model enters the week with a 100% allocation to the SPX. The model will drop to a partial allocation if the market falls and closes below the gamma flip level, currently near 4,108. This model will fall to a 0% allocation if SPX closes below the lower gamma level currently near 3,993.

The chart below shows how price (in black) relates to the gamma flip (in blue) and the lower gamma level (in red). The indicator below the price chart shows the daily positioning allocations.

The Gamma Band model can be viewed as a trend following model that shows the effectiveness of tracking various levels of market gamma. When the daily price closes below Gamma Flip, the model will reduce exposure to avoid price volatility and sell-off risk. There is also an allocation adjustment on the trend slope of the gamma flip line.

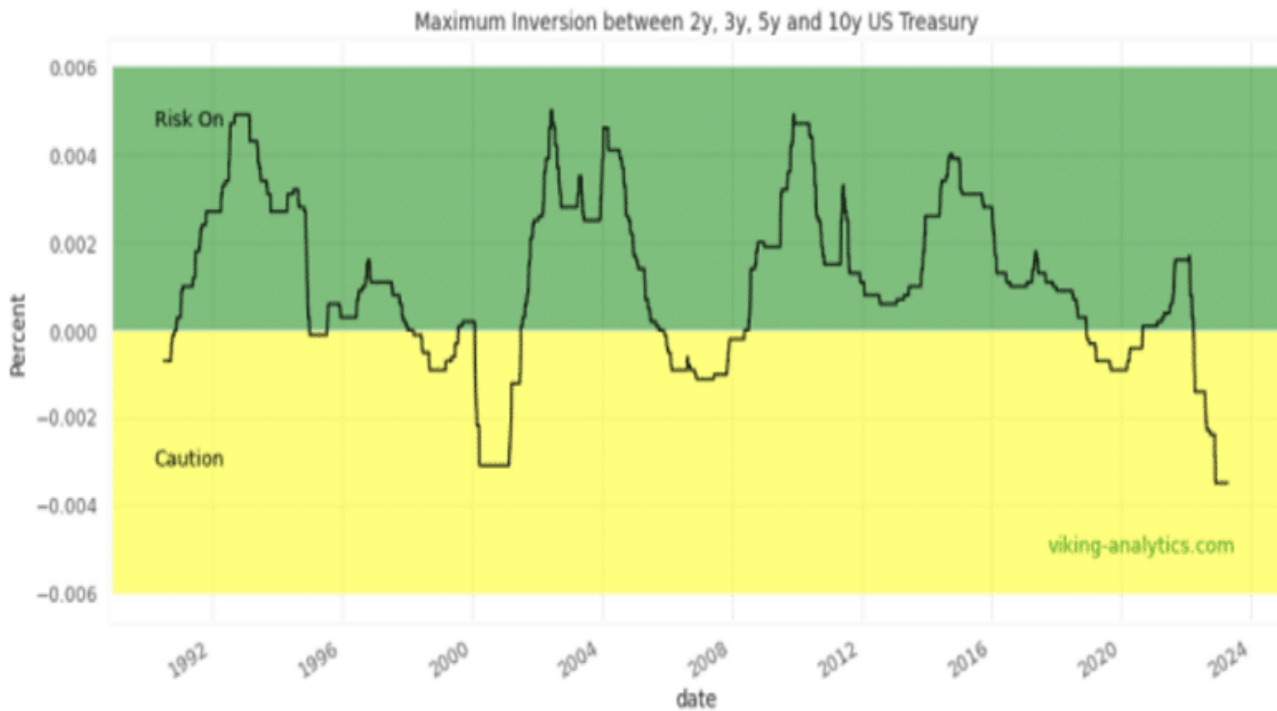

Market Navigator Signals

Our Market Navigator Report encapsulates data from the broader market and the economy to provide a near-term outlook for stocks. Fundamentally, the market remains cautious due to credit concerns and the inverted yield curve. From a technical perspective, the market continues to have bullish signals; however, our Safe Sector signal began to flash bearish last week.

Indicator Name	Indicator Class	Current State
Overnight	Technical	
Safe Sector	Technical	
Open Interest Put Call Ratio	Technical	
Market Titan	Technical	
Credit Market Support	Fundamental	
US Treasury Curve	Fundamental	

US Treasury Curve

The US treasury curve continues to be more inverted than any time in recent history. It is more inverted than the dot com sell-off, and more inverted than the Great Financial Crisis of 2008. The inverted yield curve almost always precedes a recession.
