

Long-Short Idea List: 01-31-19

Each week we produce a chart book of 5 to 10 stocks which have hit our watch list for potential additions to our long-short equity trading portfolio.

We have broken down the list into two sections - Long and Short and have provided targets for potential actions.

Importantly, these equities are not part of our long-term investment themes and are far trading purposes only. We may, or may not, implement any of the ideas on this list. They are simply for consideration.

Also, it is entirely possible that our long-term themed equity model could be long a position which could show up on the "short-idea" list temporarily. Trading and investing, while having many commonalities, are different based on time frames and objectives and are not always handled exactly the same.

HOW TO READ THE CHARTS

There are four primary components to each chart:

- The price chart is contained within the shaded area which represents 2standard deviations above and below the short-term moving average.
- The Over Bought/Over Sold indicator is in orange at the top.
- The Support/Resistance line (green) is the longer-term moving average which also acts as a trailing stop in many cases.
- The Buy / Sell is triggered when the green line is above the red line (Buy) or vice-versa (Sell).
