SimpleVisor Upgrades 04-09-2022

In our ongoing efforts to continually upgrade and improve SimpleVisor for you, the following changes are now complete.

The backend has been upgraded with the latest backend python libraries and databases. There are no visible changes, but it makes the front user experience smooth with faster execution of complex calculations.

Major Features: Strategy Builder and Strategy Ideas. **(BETA TEST)**

Single stock or ETF strategy ideas can be built and saved by Lance and Mike for users to start exploring and experimenting&#2013266080;with popular&#2013266080;trading&#2013266080;strategies. We only have a few indicators at the moment, but will be adding many more to pick and choose from very soon.

Users can make their own strategies with available indicators by mixing and matching buy and sell conditions. Users of strategy builders can test their hypotheses and hunches about trading strategies in a no-code environment. Any missing indicators can be added on request.&#2013266080;

Minor Improvements:

- Updated Charting Functionality.

- TPA posts follow the design theme as for other blogs and commentary

Please send feature addition or upgrade requests to support@simplevisor.com
