MPWR, O - negative

SELL

- MPWR fell below its 2 &#2013266109; year uptrend line earlier this month. From the March 2020 lows, MPWR rose 360% to its high in 2021 and is still up 160% from those lows even after a large decline. The zoom chart shows that MPWR broke down below support at the 350 level. This will remain tough resistance. The weekly shows that a drop below support at 300 (likely) will mean that long-term support is far below.

RRG analysis shows that MPWR has quickly moved out of the Leading quadrant, through the Weakening quadrant, and has entered the Lagging quadrant. This weakening should continue. MPWR was one of the Bottom 20 stocks in this week's TPA-RRG Report, (see the RRG below).

MPWR – weekly

- O fell below the 2-year up[trend line in September and through medium-term support at 62 in October (zoom chart). A 2-week rally puts O right at new resistance. The weekly shows that weekly reveals that the trend break makes O vulnerable to long-term support below 40.

RRG analysis shows that O has quickly moved out of the Leading quadrant, through the Weakening quadrant, and has entered the Lagging quadrant. This weakening should continue. O was one of the Bottom 20 stocks in this week's TPA-RRG Report, (see the RRG below).
